1. Software and workloads used in performance tests may have been optimized for performance only on Intel® microprocessors. Performance tests, such as SYSmark®, MobileMark®, and SPEC CPU® are measured using specific computer systems, components, software, operations, and functions. Any change to any of those factors may cause the results to vary. You should consult other information and performance tests to assist you in fully evaluating your contemplated purchases, including the performance of that product when combined with other products. For more complete information about performance and benchmark results, visit intel.com/performance. Measured by SYSmark® 2014, a benchmark from BAPCO consortium, which measures the performance of commonly used productivity applications, such as Microsoft Excel® and Adobe Acrobat®. Find out more at www.bapco.com.

2. Intel technologies' features and benefits depend on system configuration and may require enabled hardware, software, or service activation. Performance varies depending on system configuration. No computer system can be absolutely secure. Check with your system manufacturer or retailer or learn more at support.intel.com.
